

Healthy Air™

CHEMICAL SOURCE CAPTURE SYSTEM DESIGNED FOR KERATIN SMOOTHING TREATMENTS. USEFUL FOR ALL HAIR CHEMICAL SERVICES, INCLUDING COLORING, PERMS, HIGHLIGHTING AND EVEN HAIR SPRAY!

Patented Healthy Air™ System Features Include:

- *Effectively removes formaldehyde vapors and fumes from the breathing zone of stylists and clients*
- *Powerful 3 speed centrifugal down flow fan for quiet operation*
- *Prefilter for large particle capture*
- *eHEPA filter for fine particle and microorganism capture permeated by energy field to provide extremely high pathogen kill rates*
- *Enhanced Activated Carbon Filtration paired with energy field to trap and decompose VOC's and odor*
- *Large see-through capture hood with built in LED light*
- *Filter change indicator*
- *Easy filter access and maintenance*
- *Electronic control panel and wireless remote*
- *Available in white or black*

The Problem

Hair Stylists and Clients are Exposed to Unsafe Amounts of Formaldehyde and Other Chemicals While Performing Keratin Smoothing Treatments

Keratin hair smoothing products have been found to produce high levels of formaldehyde (also referred to as methylene glycol), even when labeled "formaldehyde-free". Formaldehyde is released during keratin hair smoothing product application, blow drying and flat ironing. Formaldehyde gas is a dangerous pollutant that can be severely irritating to the eyes, nose and throat

The Solution

Capture Fumes and Vapors Before They Can Enter the Breathing Zone

Aerovex Systems' Chemical Source Capture System utilizes Healthy Air™ technology to capture the vapors and fumes at the source, extract them from the breathing zone and draw them into an advanced 3 level air purification system

Technology

Healthy Air™ One of the most powerful and effective advanced air purification systems in the world that is uniquely designed to combine eHEPA technology with advanced activated carbon filtration.

Healthy Air™ Utilizes advanced eHEPA tech to capture submicron particles as well as microorganisms such as bacteria, viruses, mold and fungi with efficiencies exceeding standard HEPA grade filters and kill these microorganisms at extremely high kill rates with the application of the energy field that permeates the filter media.

Healthy Air™ Utilizes an advanced granular activated carbon filter in combination with the energy field to provide sufficient dwell time to effectively adsorb and decompose VOC's and odor

Specifications:

Model:	HA-HS-2110-A/B		
Voltage/Frequency:	120v/60 Hz		
Three Fan Speeds:	High	Med	Low
Power Consumption	125W	100W	80W
CFM:	240	195	165
Operation Noise (dB):	56	52	51
Dimensions/Weight:	14" x 16" x 34"/65 lbs - Ext. Flex Hose: 70"
